Apr 22, 2004

DOCUMENT-IDENTIFIER: US 20040077499 A1

TITLE: Process for the preparation of a dry pesticidal composition containing a dicarboxylate component

Summary of Invention Paragraph:

[0010] In French Patent Publication No. 2.692.439 assigned to Productos Osa SACIFIA, there is generally described a phytotoxic preparation comprising the mono-ammonium salt of N-phosphonomethylglycine as a powder or granule in combination with a wetting agent, surfactant and/or a pulverulent additive. As exemplified in the reference, the mono-ammonium salt is derived from reacting glyphosate acid with ammonium bicarbonate.

TITLE: Process for making a downstream processable ammonium glyphosate paste

Brief Summary Text (18):

Solid-state reaction of glyphosate acid and ammonium bicarbonate, as disclosed for example in the above-referenced '572 patent, tends to produce a particulate ammonium glyphosate having sufficient absorbency and/or adsorbency to permit satisfactory formulation with up to about 25% by weight of a liquid surfactant such as polyoxyethylene tallowamine. By contrast, reaction of a slurry of glyphosate acid with anhydrous ammonia or aqueous ammonia (ammonium hydroxide) followed by drying to form an ammonium glyphosate powder tends to produce relatively non-absorptive or non-adsorptive ammonium glyphosate particles.

Brief Summary Text (19):

Because anhydrous and aqueous ammonia are much lower-cost sources of the ammonium cation than ammonium bicarbonate, numerous efforts have been made to develop processes wherein glyphosate acid is reacted with anhydrous or aqueous ammonia, yet wherein the resulting ammonium glyphosate is suitable for downstream formulation with surfactant, especially a liquid surfactant. To date, success has been achieved only when the reaction occurs in the presence of very small amounts of water, for example about 7 parts or less by weight of water per 100 parts by weight of dry ingredients. U.S. Pat. No. 5,614,468 to Kramer et al. discloses such a process wherein solid particulate glyphosate acid is reacted with aqueous ammonia, and U.S. Pat. No. 5,633,397 to Gillespie et al. discloses such a process wherein solid particulate glyphosate acid is reacted with gaseous anhydrous ammonia.

DOCUMENT-IDENTIFIER: US 6599858 B1

TITLE: Process for making ammonium glyphosate flakes

Brief Summary Text (12):

Solid-state reaction of glyphosate acid and ammonium bicarbonate, as disclosed for example in above-referenced U.S. Pat. No. 5,656,572, produces a particulate ammonium glyposate that can be used directly as a herbicidal product, or granulated, for example by pan granulation, to make a dry granular herbicidal product, or further processed with surfactant. Alternatively, an aqueous slurry of glyphosate acid can be reacted with anhydrous ammonia or aqueous ammonia (ammonium hydroxide) to produce a concentrated solution or slurry of ammonium glyphosate. This solution or slurry then has to be dried if the desired finished product is a dry herbicidal composition.
